## PROJECTS

---

### 1.Blackcoffer Mobile Application Design (Figma, wireframing, prototyping)

- Blackcoffer is one of the news websites which I designed for mobile Applications as my personal project.
- It consist of 11 pages which are linked one another through prototyping.

### 2.Linkedin webscrapping

- Used selenium for Linkedin web scrapping.
- Retrieves All the Job Titles/Roles From Careerguid.com.

### 3.GUI QR-Generator

- Developed a user-friendly desktop application using Python's Tkinter library to generate QR codes for provided links.
- The application allows users to input a URL and generates a corresponding QR code, providing the option to download the QR code image for offline use.
